Mark the participles

The oceans, encompassing about 71% of the Earth's surface, are vast and deep bodies of water. They are divided into five major basins: the Pacific, Atlantic, Indian, Southern, and Arctic. The water, constantly moving in currents and tides, shapes the climate and weather patterns of the world. The marine life, thriving in the oceans, includes everything from microscopic plankton to massive whales. The seabed, covered in layers of sediment, is a rich source of minerals and resources. The ocean's surface, reflecting the sunlight, is a thing of beauty and wonder. The ecosystems, interconnected within the oceans, rely on each other for survival. The oceans, regulating the Earth's temperature, play a crucial role in maintaining the balance of life on our planet.

Form sentences with participles

the, the, ocean, gracefully, moved, sailboat, across, surface, Gliding

habitat, was, bustling, with, the, coral, a, Teeming, life, reef

sound, created, the, waves, against, a, rocks, the, thunderous, Crashing
